How to set a sine amplitude in stm32cubeide?

In the generated code from the STM32CubeIDE, create a define to the offset as 50, since it will not change its value. Then, create the variables for the sine table, the string, buffer, and index of each frequency and amplitude, and finally set the sine amplitude variable to 100, which means that the startup amplitude is 100% if no value was given.

What are affiliate programs & affiliations for STM32 microcontrollers?

Affiliate programs and affiliations include, but are not limited to, the eBay Partner Network (EPN) and Amazon.com. As we've seen in the previous tutorial (STM32 PWM As A DAC), the PWM peripheral in STM32 microcontrollers can be used as a DAC to output analog voltage that corresponds to the duty cycle of the PWM signal.

How to control the amplitude and frequency of a SPWM?

The frequency, phase and amplitude should be controlled through digital buttons. [OK] Guarantee that interruption have the timer and counter well adjusted to required time. The matlab script is used to generate the senoid values that are used as reference for the SPWM generation.

How to calculate ARR based on a sinewave frequency?

Output SineWave Frequency = Trigger frequency / 128 1KHz = TriggerFrequency / 128 TriggerFrequency = 128KHz  
TriggerFrequency = 72MHz / (PSC+1) (ARR+1) 128KHz = 72MHz / (PSC+1) (ARR+1) let's choose PSC = 0, and solve for ARR ARR will therefore be ARR = 561.5
