The spiral ground pile is made of hot-dip galvanized steel pipes with spiral blades. The blades can be large or small, continuous or intermittent.

Metaloumin presents the single-pile support system for photovoltaic collectors, with a fixed or adjustable (seasonal) slope.

To study the frost jacking performance of photovoltaic support steel pipe screw pile foundations in seasonally frozen soil areas at high latitudes and low altitudes and prevent ...

Steel is one of the most commonly used materials for piles in solar farm construction. Its high strength-to-weight ratio makes it ideal for bearing significant loads, and it can be driven into a ...

The metal structures offered by us are ideal for photovoltaic panels (solar panels), and because they are made of light steel profiles designed and manufactured with high precision, the assembly becomes ...

This study investigates the horizontal load-bearing properties of steel pipe piles used in offshore photovoltaic systems by conducting field tests with single-pile horizontal static loads and ...

This system serves as the structure that supports photovoltaic modules and directly impacts the stability, safety, and power generation efficiency of the photovoltaic power station.

Our C-piles are designed to offer exceptional strength and corrosion resistance, ensuring long-lasting support for solar arrays. Ideal for ground-mounted systems, our C-piles serve as stable foundation ...
