Are solid-state sodium batteries sustainable?

Solid-state sodium batteries represent more sustainable options as they combine resource abundance with safety. This work advances their performance, particularly fast cycling lifespan, to an unprecedented level utilizing a hybrid electrolyte.

Are solid-state sodium batteries suitable for grid-scale stationary storage?

Solid-state sodium batteries are ideal candidates for expanding grid-scale stationary storage as they promise high safety, low cost and long cycling lifespans 1, 2, 3. The realization of such systems depends largely on the development of electrolytes with interface compatibility, safety and high conductivity.

Can a hybrid solid-liquid electrolyte be a sustainable sodium battery?

We show a strategy to address the unstable solid-liquid interface in the hybrid solid-liquid electrolyte for a sustainable sodium battery. Aiming to design polymers with low polarity and moderate solvation as a transition layer, PETEA was selected as the coating for NZSP, which decreases interfacial parasitic reactions and enhances ionic transport.

Are sodium ion batteries a good substitute for lithium-ion batteries?

Sodium-ion batteries in heavy-duty transportation and stationary storage applications Sodium-ion batteries (SIBs) are garnering significant interest as a promising substitute for lithium-ion batteries (LIBs), especially within the commercial and heavy-duty transportation industries.

The Sodium-ion Battery energy storage project at Cleantech Park represents the first real-world deployment of a system tailored specifically for hybrid solar installations.

Sodium-ion batteries (SIBs) are being actively investigated as a potentially viable and more sustainable alternative to lithium-ion batteries (LIBs), driven by concerns over lithium resource ...

Moonwatt to deploy new class of sodium-ion battery energy storage system specifically developed for hybrid solar plants Moonwatt's modular " string batteries " leverage sodium-ion cells ...

Moonwatt launches Europe's first sodium-ion energy storage project in the Netherlands. The modular NFPP system marks a commercial milestone for alternative battery tech.

As the global demand for sustainable energy storage escalates, sodium-ion batteries (SIBs) have emerged as a promising alternative to lithium-ion systems, leveraging the abundance and low cost of ...

Solid-state sodium (Na) batteries open the opportunity for more sustainable energy storage due to their safety, low cost and high energy density.

Citation IRENA (2025), Sodium-ion batteries: A technology brief, International Renewable Energy Agency, Abu Dhabi.

Therefore, a novel energy storage system has emerged combining the advantages of batteries and supercapacitors, the hybrid capacitors (HCs). Sodium-ion hybrid capacitors (SIHCs) ...
