In order to improve the utilization efficiency of wind and photovoltaic energy resources, this paper designs a set of wind and solar complementary power generation ...

By calculating the Kendall rank correlation coefficient between wind and solar energy in China, the study mapped the spatial distribution of wind-solar energy complementarity.

A globally interconnected solar-wind power system can meet future electricity demand while lowering costs, enhancing resilience, and supporting a stable, sustainable ...

Wind-solar-hydro complementary potential shows great temporal and spatial variation. Renewable complementarity can improve China's future power system stability.

With the increasing demand for communication services, major operators have launched fierce market competition, and one of them is to enlarge the number of communication base stations. ...

power system dominated by solar and wind energy presents immense challenges. Here, we demonstrate the potential of a globally interconnected solar-wind system to meet future electricity

The invention relates to a communication base station stand-by power supply system based on an activation-type cell and a wind-solar complementary power supply system.

Future research will focus on stochastic modeling and incorporating energy storage systems. This paper proposes constructing a multi-energy complementary power generation system integrating ...
