What percentage of Latvia's energy consumption is solar?

The share of bioenergy in Latvia's total renewable energy consumption was 82% in 2022, 30% higher than the IEA average in 2021 (52%). * Solar is not visible on this scale and accounted for 0.2 PJ in 2022. Source: IEA (2023), World Energy Balances (database). IEA. CC BY 4.0.

What is the energy policy of Latvia and EU?

an and the energy system of Latvia and EU 1.2.1.1. Context of the policy of the National Plan At the EU level, the energy policy for 2050 is defined in the EC Communication A EU Roadmap for Moving to a Competitive Low Carbon Economy in 2050 55, with the ng, as well as GHG emission reduction tech achieving global leadership in rene

What is a conservative scenario for energy development in Latvia?

ons mainly working in a cogeneration mode in winter. The conservative scenario includes the development of wind power plants, biomass and biogas power plants, small gas cogeneration power plants, and solar power plants under a condition that the development rate of each generation source in Latvia can be in

How much energy does Latvia save?

Source: IEA analysis based on Eurostat (2023), Complete energy balances and European Commission (2024), Latvia's National Energy and Climate Plan. Additionally, in line with the revised EU Energy Efficiency Directive, Latvia has set a mandatory target of cumulative end-use energy savings of 106.3 PJ by 2030.

Specifically, in light of the energy crisis stemming from Russia's invasion of Ukraine, an accelerated shift to clean energy solutions (especially energy efficiency and renewables) can bring down energy costs ...

Unlike in the EU, there has been a significant decrease in both total primary energy consumption and final energy consumption in Latvia during the period from 1990 to 2000 and also during the period ...

In 2025, Latvia is doubling down on its solar ambitions. The impressive growth trajectory is driven by a clear national strategy to enhance energy security and meet EU climate goals.

In Latvia, renewable energy sources account for a significant portion of the country's electricity generation, with a target of 57% by 2030 [1]. Hydroelectric power is the main source of ...

It draws on the IEA's extensive knowledge and the inputs of expert peers from IEA member countries to assess Latvia's most pressing energy sector challenges and provide ...

To achieve these goals, Latvia has developed a range of policies and measures, including: Promoting the use of renewable energy sources, such as wind, solar, biomass, and geothermal energy, through ...

It examines and scores six key areas: governance, incentives & support schemes, permitting procedures, energy sharing schemes, energy communities and additional measures to support solar ...

These developments highlight the country's commitment to reducing reliance on fossil fuels, enhancing energy storage capabilities, and promoting innovation in renewable energy projects.
