In this guide, we'll break down the eight most common reasons for low solar power generation. You'll learn what each issue looks like in real life and what to do next to restore your system's performance.

Underperforming solar panels can result in decreased energy output and longer payback times. That's why Solar Medix experts with over 17 years of experience have come up with this guide ...

At 15% soiling loss, you're losing about 450 watts of generating capacity. Over a sunny day, that could translate to 2-3 kWh of energy you paid for but aren't using--roughly what it takes to run your ...

One of the most common complaints we hear from homeowners is that their electricity bills are still high because their new solar panels are not producing enough power. You were sold on ...

Solar panels generate more electricity during summer. Even the most efficient solar panels become less productive over time, but this happens at a very slow rate. The annual ...

Discover why your solar panels are underperforming and how to fix it. Expert troubleshooting guide with step-by-step solutions, safety tips, and cost estimates.

This article explores some of the most common reasons why your solar panels may be generating less power and how you can effectively address these issues.

Learn about why your solar panels may not be reaching maximum efficiency, and what you can do to ensure your panels are performing optimally.
