-----

With China implementing major changes to its solar market design this year, a temporary dip in global growth in 2026 appears very likely. Meanwhile, other regions are falling behind, ...

Growing demand for renewables-based clean electricity coupled with government policies, tax rebates, and incentives to install solar panels is expected to drive the growth of solar PV panels industry in ...

Rapid urbanization and consumer base due to increased population led to potential market growth. The high demand for electricity across remote regions and the industrial setup for energy ...

Rapid urbanization and consumer base due to increased ...

PV energy production reached more than 10% of the world electricity consumption for the first time. The theoretical penetration rate of PV has grown across the world as capacity increases faster than ...

Growing demand for distributed generation in residential and commercial segments, coupled with the expansion of utility-scale solar farms, is reinforcing market expansion.

Meeting international energy and climate goals requires the global deployment of solar PV to grow on an unprecedented scale. This in turn demands a major additional expansion in manufacturing capacity, ...

Installation of solar panels on rooftops in residential and commercial buildings is increasing owing to reduced panel prices and favorable policy frameworks, including feed-in tariffs, ...
