If you invest in renewable energy for your home such as solar, wind, geothermal, fuel cells or battery storage technology, you may qualify for an annual residential clean energy tax credit.

The plan proposes to phase out the investment tax credit and production tax credit for solar and wind while keeping it in place for other technologies.

The federal solar tax credit ends after December 31, 2025. That means solar panels will no longer be a viable investment for homeowners, right? Wrong. It's still one of the smartest long ...

Wind and solar are no longer at a cost disadvantage. One of the stated goals of renewable energy subsidies and mandates has been to stimulate demand for wind and solar ...

In this blog, we'll explain what the change means and how to plan ahead to secure your 30% federal tax credit if you're purchasing your system outright before the window closes. Planning ...

Kennedy's neighbors and other consumers were reacting to a profound policy shift in California: The state Public Utilities Commission in late 2022 slashed by about 75% the rate that ...

Learn how residential solar power works, why costs are falling worldwide, and how to calculate your payback period with clear examples and real data.

Here's what you need to know about what's happening to federal tax incentives for everything from solar panels to heat pumps to electric vehicles, and how much time you have to get ...
