Recent initiatives in Tunisia demonstrate how transitioning to ...

Though hydrocarbon-based generation will continue to dominate Tunisia's overall energy picture in the near term, the potential for growth in wind and solar power generation is significant.

Tunisia's energy storage power generation sector is transforming faster than a desert sunset. With solar irradiation levels hitting 5.3 kWh/m²/day and wind speeds reaching 9 m/s in coastal areas, this North ...

With the addition of the Wadi project, Voltalia's total solar capacity in Tunisia that is planned to move into the construction phase has reached nearly 400 MW. Furthermore, the project aligns ...

solar PV and wind together accounting for nearly 70%. The integration of these variable energy sources into national energy grids will largely depend on storage technologies, and among them especially ...

The ELMED interconnection project, which will link Tunisia to Italy by 2028, will play a key role in stabilizing energy supply, while supporting the energy transition in Tunisia and Europe.

Tunisia has awarded French renewable energy company Voltalia a contract to develop a 132-megawatt solar power project to boost electricity supply in the country.

Recent initiatives in Tunisia demonstrate how transitioning to renewable energy sources could bring affordable power to communities and reduce poverty. However, these efforts also ...
