-----

Plug-in solar has remained in the shadows because of a lack of safety standards and often costly requirements imposed by utilities, but that's changing.

There are two main types of solar energy technologies--photovoltaics (PV) and concentrating solar-thermal power (CSP). On this page you'll find resources to learn what ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, according to a new ...

In 2022, the world added more new solar capacity than all other energy sources for electricity combined. Global energy generation from solar photovoltaic (PV) panels, which convert ...

In terms of technologies, solar PV alone is forecast to account for a massive 80% of the growth in global renewable capacity between now and 2030 - the result of the construction of new ...

To call solar power's rise exponential is not hyperbole, but a statement of fact. Installed solar capacity doubles roughly every three years, and so grows ten-fold each decade.

Need Help? If you are having problems logging into SOLAR, there are a number of self-help and support resources available to you:
