Hiring difficulty decreased notably since 2022, when 44% of solar employers indicated that hiring was very difficult. This change may reflect a slowing pace of industry growth and increasing labor ...

At a time of dynamic, sweeping change, a looming worker shortage in a critical field is not what we need. Yet, by a growing number of estimates, it's what we're facing. By 2033, the United ...

The renewable energy sector is experiencing significant growth, particularly in wind and solar power, which now represent a substantial portion of electricity generation in the United States. ...

The first section details a brief history of solar power in the United States, followed by an overview of how solar power is generated, which entities use it, and the technology involved in supplying solar ...

Solar, wind and battery storage capacity lead all forms of electricity generation growth nationwide, especially in Texas. As installation costs have fallen in recent years and various tax ...

Even before the policy swings, 44% of solar employers reported hiring difficulties, especially in construction roles. The issue extends beyond simple labor shortages to finding workers ...

The solar industry is at a crossroads--demand is surging, but the workforce isn't keeping up. To keep the clean energy transition moving forward, companies must invest in workforce development, ...

As governments and corporations push for a cleaner energy future, the solar workforce is increasingly strained by rising demand for qualified technicians, project managers, and engineers.
