The project combines a 250 MW solar farm with a fishery. Beijing-based company Dajin Heavy Industry claims the project represents an extremely efficient land utilization.

Eyeing massive marine resources, turbine manufacturers across the country are stepping up efforts to integrate new energy projects with aquaculture farms, where fish, lobsters and crabs ...

Concord New Energy, a Chinese company that specializes in wind and solar power project development and operation, has installed a 70 MW solar plant atop a fish pond in an industrial park in...

FPCI projects offers advantages in terms of energy efficiency and land utilization. The decline in aquaculture yields can be prevented by strategic deploying photovoltaic modules and ...

This initiative integrates wind and photovoltaic power generation, energy storage, and a digital energy management system to ensure uninterrupted power supply for offshore fishery ...

A trial project in China has successfully cultivated high-value marine species, such as grouper, lobster and abalone, by utilising cold energy from liquefied natural gas (LNG) as it seeks to...

It is planned to launch the second phase of fish farming next year, which will involve expanding the scale of operations and improving the overall utilisation rate of the site. The result will be a sustainable ...

China completed the world's first maritime renewable energy project that combines deep-sea floating wind energy, solar energy, and aquaculture. It is located in the Nanri Island National ...
