---

A German Architect has designed an innovative form of a solar power generator. Unlike being flat or thin like other PV panels, this one is a giant transparent sphere!

Here's the fun part: When there's excess solar or wind power, the system pumps water out of the ball-shaped tanks deep underwater. When energy is needed, seawater rushes back in, ...

After several years of development, the solar collector Rawlemon begins his commercial career. Created by the German architect Andr#233; Broessel, it is a transparent ball filled with water capable of converting ...

The spherical generator works by using a large transparent sphere to focus sunlight onto a small surface area of mini-solar panels. Efficiency is enhanced because the solar panels used in ...

The company claims these spheres could achieve 60 times more energy output than solar panels in natural or artificial light.

Above the miniature array of solar cells is a large water-filled glass orb that works similarly to a magnifying glass in focusing the light that's present during all sorts of less-than-ideal ...

the spherical glass solar energy generator uses the advantageous strategy of implementing a ball lens and specific geometrical structure to improve energy efficiency by 35%.

? Researchers at Germany's Fraunhofer Institute are exploring the use of underwater concrete spheres to store renewable energy. ? These spheres operate by using deep-sea pressure to ...
