---

Discover how South Tarawa's rural communities are adopting rooftop photovoltaic panels paired with Battery Energy Storage Systems (BESS) to overcome energy poverty.

It will do this by installing the innovative, climate-adapted and efficient floating PV (FPV) for power generation and for services and benefits beyond electricity.

The South Tarawa Renewable Energy Project (STREP-the project), ADB's first in Kiribati's energy sector, will finance climate-resilient solar photovoltaic generation, a battery ...

This document dated December 2024 is provided for the ADB project 49450-030 in Kiribati.

Supported by the bank and co-financed by the Kiwi government, the project's solar and BESS components were procured under the ADB's South Tarawa Water Supply Project co-financed ...

The increased financing enabled the increase in the scope and size of the solar photovoltaic (PV) and battery energy storage system (BESS) capacities compared with the IP figures.

While grid-connected solar power is the least-cost renewable energy option for South Tarawa and there is significant resource potential of 554 MW, deployment has been limited..

The joint procurement of the PV, BESS and O& M contracts for STREP and for the South Tarawa Water Supply Project (STWSP) funded by the ADB, the Green Climate Fund, and the World Bank enabled ...
