---

Iberdrola Spain has begun commissioning the 225 MW Valdecañas pumped hydro energy storage (PHES) plant which is hybridized with a 15 MW / 7.5 MWh battery energy storage system.

Iberdrola España has commissioned the first pumping station set at Valdecañas, in Cáceres, Extremadura, which has a total capacity of 225 MW and includes a hybridized battery of 15 ...

Ingeteam and Iberdrola have already collaborated on other renewable energy hybridization projects involving storage, such as the first battery system installed at an operating ...

Iberdrola is at the forefront of technological optimization of pumping stations, integrating advanced variable speed systems, computational models to manage higher power, and hybrid technologies ...

Spain is poised to lead Europe in renewable energy by constructing the continent's largest pumped storage power plant. Managed by Iberdrola, the Conso II project in Ourense, in Galicia, will ...

Iberdrola, one of Spain's largest energy groups, operates extensive pumped-hydro storage assets (e.g., Cortes-La Muela, Aldeadóvil) and is developing hybrid wind-solar projects to ...

Discover how pumped-storage power plants play a crucial role in the transition to a more sustainable and efficient energy matrix with Iberdrola Spain.

It allows the storage of surplus energy from unmanageable renewable energy sources, solar and wind, to be delivered at the times when it is most needed, providing stability to the ...
