What is a stream Solar System?

SEATTLE, May 7, 2025 /PRNewswire/ -- EcoFlow, a leading portable power and eco-friendly energy solutions company, today introduces STREAM Series, the first plug-and-play home solar system available in the U.S. with a battery that can power your home.

How do stream ultra solar panels work?

Unlike rooftop systems that require property ownership, building approvals, and often costly electrical work, the STREAM Ultra operates as an appliance. Place the panels, plug the system in, and start saving. The Microinverter variant is also available as a standalone product for households that want immediate solar generation without storage.

What makes stream series a good solar solution?

Utah's rising electricity rates, strong solar potential and growing percentage of multi-family dwellings make STREAM Series a great option for residents seeking a plug-and-play, DIY solar solution with no installation, no complex setup and no utility approval needed.

How much solar energy does stream ultra collect?

STREAM Ultra can also collect 2000W of solar input, with 1,200W being directly fed into your home via the built-in microinverter, while any excess energy is stored in the battery.
