The Coalition aims at accelerating the decarbonisation of the European energy system by increasing the deployment of sustainable and clean energy storage solutions to support renewables.

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage.

The Recommendation was accompanied by a Staff Working Document (SWD/2023/57) which looked at the role and application of storage in the energy transition, emphasising the need for ...

This paper explores how different energy storage technologies--batteries, pumped hydro, and hydrogen--can be combined to achieve a carbon-neutral European power grid by 2050.

With this paper we assess the energy storage requirements as a whole for Europe and propose estimates of energy storage targets for 2030 and 2050 based on a review of existing scientific. ...

In conclusion, energy storage systems play a crucial role in modern power grids, both with and without renewable energy integration, by addressing the intermittent nature of renewable energy sources, ...

We consider three storage technologies, namely battery, pumped hydro, and hydrogen storage, and quantify the impact of modeling the European electricity system with different spatial ...

This report outlines the EU-level regulatory framework and policy drivers for storage and evaluates the adoption of storage policies or targets by EU Member States in their national energy and climate ...
