For the first time ever, power generation from renewables and nuclear covered two-fifths of total global generation in 2024. Renewables collectively accounted for one-third of electricity generation, led by ...

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for ...

Discover how much energy solar panels actually produce in 2025. Get real-world data, calculations, and factors affecting solar panel output. Free calculator included.

Our annual report on electricity generation capacity in the United States breaks down the current and imminent generation of electricity by type of fuel, location, and ownership type. The report also looks ...

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

Electricity generation by the U.S. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U.S. ...

Electricity generation from solar continues to grow alongside capacity additions. For the rolling 12 months ending March 2025, solar facilities, including utility-scale and small-scale projects, ...

The latest 2021 annual statistics show that 3.9% of US electricity comes from solar power, up from 3.2% the previous year. Solar provided 0.95% of electricity in the US in 2015, and ...
