The new hybrid storage system developed in the HyFlow project combines a high-power vanadium redox flow battery and a green supercapacitor to flexibly balance out the demand for ...

We report the performance of an all-rare earth redox flow battery with $\text{Eu}^{2+} / \text{Eu}^{3+}$ as anolyte and $\text{Ce}^{3+} / \text{Ce}^{4+}$ as catholyte for the first time, which can be used for large-scale energy ...

Our research team combines decades of experience analyzing flow battery technologies, European Green Deal implementations, and cross-border grid infrastructure developments.

Flow batteries have emerged as game-changers for grid-scale energy storage, especially when paired with solar and wind power. Unlike traditional lithium-ion batteries, these systems store energy in ...

Leaders from FBE and the private equity-backed FlexBase Group met in Laufenburg, Switzerland to mark the launch. The flow battery system, on a 20,000 m² site, will be able to store ...

Nate Kirchhofer, BioZen: Development and validation of a flexible, low-cost, small-volume flow cell platform for high-throughput flow battery research, development, and deployment

The project HyFlow has tackled these challenges and developed a hybrid energy storage system consisting of a vanadium redox flow battery, a supercapacitor, advanced converter topologies and a ...

A promising technology for performing that task is the flow battery, an electrochemical device that can store hundreds of megawatt-hours of energy--enough to keep thousands of homes running for many ...
