The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity reached 1 TW, increasing to 2 TW in 2024. The top ...

Global solar photovoltaic capacity has grown from around 40 gigawatts in 2010 to approximately 2.2 terawatts in 2024. Only in that last year, installations increased by almost 40 ...

4.4% of our global energy comes from solar power. China generates more solar energy than any other country, with a current capacity of 308.5 GW. The US relies on solar for 3.9% of its ...

Share of electricity production from solar, 2025 Measured as a percentage of total electricity produced in the country or region.

OverviewGlobal use figuresAfricaAsiaEuropeNorth AmericaOceaniaSouth AmericaMany countries and territories have installed significant solar power capacity into their electrical grids to supplement or provide an alternative to conventional energy sources. Solar power plants use one of two technologies: o Photovoltaic (PV) systems use solar panels, either on rooftops or in ground-mounted solar farms, converting sunlight directly into electric power.

In 2022, 4.6% of the world's electricity generation came from solar energy, an increase from the previous year. China consumed the largest share ...

Renewables consist of hydro (47%), wind (26%), solar (18%), biomass (8%) and geothermal (1%). China produced 32% of global renewable electricity, followed by the United States (11%), Brazil (7.0%), ...

In China, the government's proactive stance on renewable energy has paved the way for solar power, constituting about 30% of the nation's electricity generation.
