Is solar the cheapest option for large-scale energy generation?

Even here in the UK, a country that sits 50 degrees north of the equator, solar is the cheapest option for large-scale energy generation. Globally, the total amount of solar power installed passed 1.5 terawatts in 2024 - twice as much as in 2020 and enough to power hundreds of millions of homes.

How much does solar energy cost?

Solar energy is now so cost-effective that, in the sunniest countries, it costs as little as $\pounds 0.02$ to produce one unit of power, making it cheaper than electricity generated from coal, gas or wind, according to a new study from the University of Surrey.

Where is the cheapest place to build solar power?

The projects in Brazil and Portugal only sell some of their electricity into the power purchase agreement, while the rest is being sold into the open market. All of these prices are remarkable, but India is still the cheapest place to build solar power. India offers no incentives, no green credit, and no special relationships, just pure price.

What is the cheapest source of renewable electricity in 2024?

Over the past year, new utility-scale onshore wind projects remained the cheapest source of renewable electricity (LCOE of USD 0.034 per kWh), followed by new solar PV (USD 0.043 per kWh) and new hydropower (USD 0.057 per kWh).

Cost reductions in utility-scale solar PV and energy storage systems have been "unprecedented" since 2021, the researchers said. Image: Wikimedia Commons Solar PV is the ...
