According to the Solar Energy Industries Association (SEIA), the number of solar businesses in the U.S. now exceeds 10,000, contributing to job growth across multiple fields, ...

This article explores the top industries benefiting the most from solar energy in 2025, highlighting how they are using solar technologies to cut costs, increase efficiency, and demonstrate environmental ...

For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly from utility-scale projects, while offshore ...

On the demand side, many cleantech manufacturing, data center, and direct air capture (DAC) operators are seeking to meet their infrastructural load growth needs with significant shares of renewables. On ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Across all regions, developing a skilled workforce and setting ambitious solar and storage targets are essential tasks. In these times of political uncertainty, low-cost solar power could turn into ...

Along with our partners at Wood Mackenzie Power & Renewables, SEIA tracks trends and trajectories in the solar industry that demonstrate the diverse and sustained growth of solar across the country.

In 2024, China, the EU, and the United States continued to represent more than 80% of annual PV installations. However, large growth occurred in other markets, particularly India (+92%) ...
