The proposed control strategies enhanced the steady-state and transient stability of the hybrid wind-solar-energy storage AC/DC microgrid, achieving seamless grid-connected and islanded ...

In our study, we are focusing on a hybrid AC/DC MG connected to a main AC grid, and using WTs based on a doubly fed induction generator (DFIG), PV panels, AC and DC loads as well ...

In this paper, the typical structure of an AC-DC hybrid microgrid and its coordination control strategy are introduced, and an improved microgrid model is proposed.

This research presents an original energy management and control strategy that focuses on efficiently managing the power supply to EV charging stations within a DC microgrid.

On this basis, this paper presents an improved model of a wind-solar storage hybrid AC-DC microgrid based on a doubly-fed induction generator (DFIG), along with control methods for ...

Abstract This work proposes a novel power management strategy (PMS) by using hybrid artificial neural networks (ANNs) based model predictive control (MPC) for DC microgrids (DCMG) ...

Consequently, this paper introduces a comparative analysis of the performance of a hybrid renewable PV/wind DC-bus microgrid that separately implements fuzzy-controlled battery and SMES ...

In this article, we address the grid-connected wind-solar-storage microgrid system by establishing a mathematical model for the output power of wind and photovoltaic generation as well ...
