Plate sizes can be standard or tailored to project requirements with minimum order quantities as low as 2 metric tons per size. Thickness range: 8mm to 200mm Yield strength range: 355 - 490 N/mm² or ...

According to German building regulations, the requirements of the DIBt guideline must be met for wind turbines: eg. additional load cases, DIN EN with country-specific additions, concrete design models, ...

Starting from the B-1 blade with a thickness of 0.1 mm, the B-2 blade with a thickness of 0.15 mm, the B-3 blade with a thickness of 0.2 mm, the B-4 blade with a thickness of 0.25 mm, and the B-5 blade ...

To meet the requirement of higher bearing capacity caused by the growth of wind turbine power and tower height, the diameter and thickness of tubes need to be improved, leading to a ...

IEC61400-2 categorizes small wind turbines into four classes based on extreme wind speed, which is the 3-second gust wind speed with a 50 year recurrence period. For Class III, the example class ...

This study analyzes the split spherical node concrete-filled steel tube wind turbine plane towers with web member wall thicknesses of 3 mm (TJ-1) and 5 mm (TJ-2) through low-cyclic ...

A very detailed 2D-solid finite element model is developed representing the load-carrying box girder of a wind turbine blade.

From Guidelines for Design of Wind Turbines, 2nd Edition, DNV 2002 and Garrad Hassan and Partners, Bristol, U.K.
